Protect web server against SlowLoris attack

- For example write a bash script to restart apache if it has more than 25 concurrent processes
- Then add your script into cron jobs and run it periodically

```
1 #!/bin/bash
2 # author: mark shust
3 # created: 2009.10.12 09:16
4
5 # get number of apache processes
6 apachemem=`ps axo 'pid user size cmd' | grep apache | grep -v '\(root\|grep\)' | wc -L`
7
8 # restart apache if there are more than the defined number of running processes
9 if [ $apachemem -gt 25 ] ; then
10     /etc/init.d/httpd restart
11 fi
12
```

anti_slowloris.sh

```
1 0,5,10,15,20,25,30,35,40,45,50,55 * * * * /etc/custom/anti_slowloris.sh
```
