Advanced Web Hacking

Welcome!
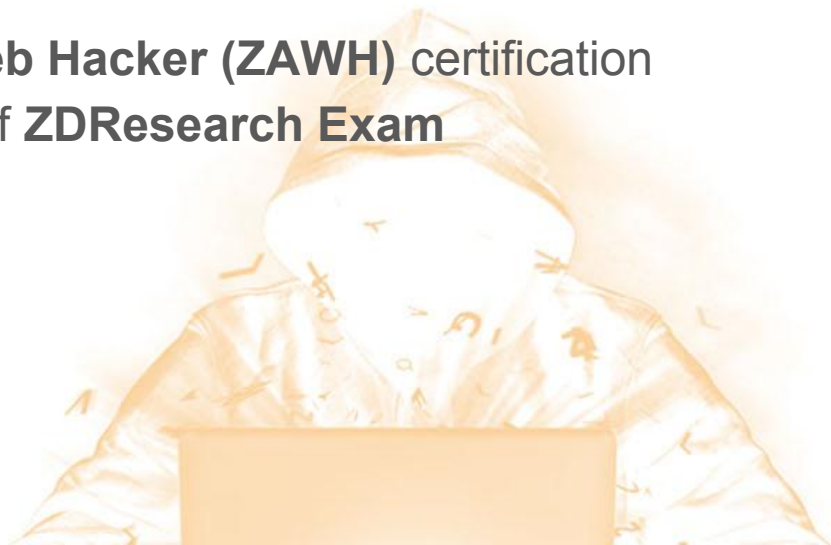

Welcome!

- Welcome to ZDResearch Advanced Web Hacking

- An advanced, detailed course, including many lectures and assignments

- Provides a certificate from your learning platform upon successful completion

- Also provides **ZDResearch Advanced Web Hacker (ZAWH)** certification upon successful completion and passing of **ZDResearch Exam**
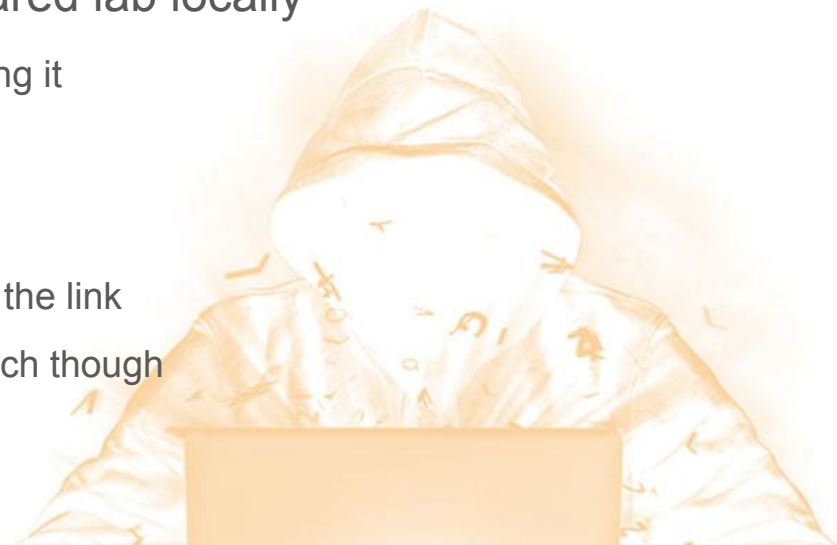

Lectures

- The course will include lectures in 9 categories

    - Divided into sections

- More lectures will gradually be added to categories

- More categories will also be gradually added to the course

- Lectures contain more than 1000 minutes of hands-on video material

    - As well as references and links for further study on a topic

ZDResearch
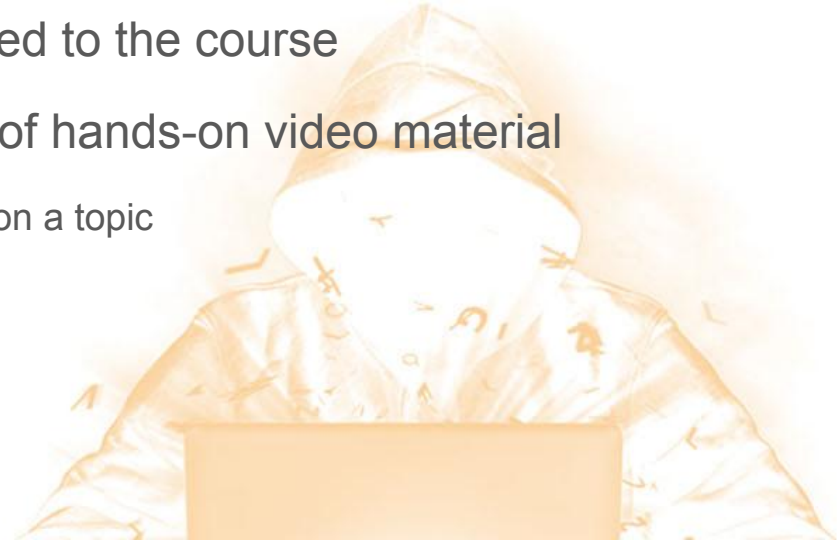

Assignments and Labs

- There are several assignments and labs for each section

- You can download each section's materials as an attachment

  - And mess with it in your own environment

- You can set up all the materials as a prepared lab locally

  - And mess with the material while testing and using it

  - No need for configuration and installation

- Or you can use our online student labs

  - Zero effort for setup and configuration, just go to the link

 - You won't be able to modify files and change much though

ZDResearch

Automated Lab

http://lab.awh.zdresearch.com

Setting up the lab locally

- Available on docker!
  - *$ docker run -p 80:80 -td zdresearch/advanced-web-hacking*
- If not running on localhost:80, provide the full hostname as a parameter:
  - *$ docker run -p 8080:80 -td zdresearch/advanced-web-hacking http://mywebsite.com:8080*
  - Very important to provide the full hostname if it's not localhost
    - Or many parts of the lab will not work
- To get an interactive shell and modify files as you practice, use
  - *$ docker run -p 80:80 -it zdresearch/advanced-web-hacking*
- Docker -t creates a tty, -i is interactive, -d means daemon mode.
